Molsom & Associates have an eye on your future using the latest technology in digital photography.

Retinal Photography

The advanced new method of examining your eye health

We are committed to providing our patients with the highest standard of eye care available. Our job is not only to ensure that your vision is at its best, but also to check the health of your eye - and consequently your overall wellbeing.

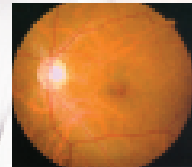

We have just recently installed the latest technology to ensure you continue to have the best possible vision and enjoy good health. When we examine your eyes, we always look for the signs of disease which can be detected from looking at the back of your eyes. With the latest digital retinal camera we can now take a photograph which will enable us to carry out a far more detailed examination than was previously possible. Every time you visit our

practice, we will be able to compare your photographs to detect even the very smallest changes which might be the earliest tell-tale signs of disease. Many diseases are easier to treat and far less threatening when diagnosed early.

We believe that this technology will benefit both our NHS and private patients and is available at a small extra charge of only £9. An investment in your future

health that is well worth making. When you next come into the practice, please ask for details.

Choose the perfect frame and lens just for you

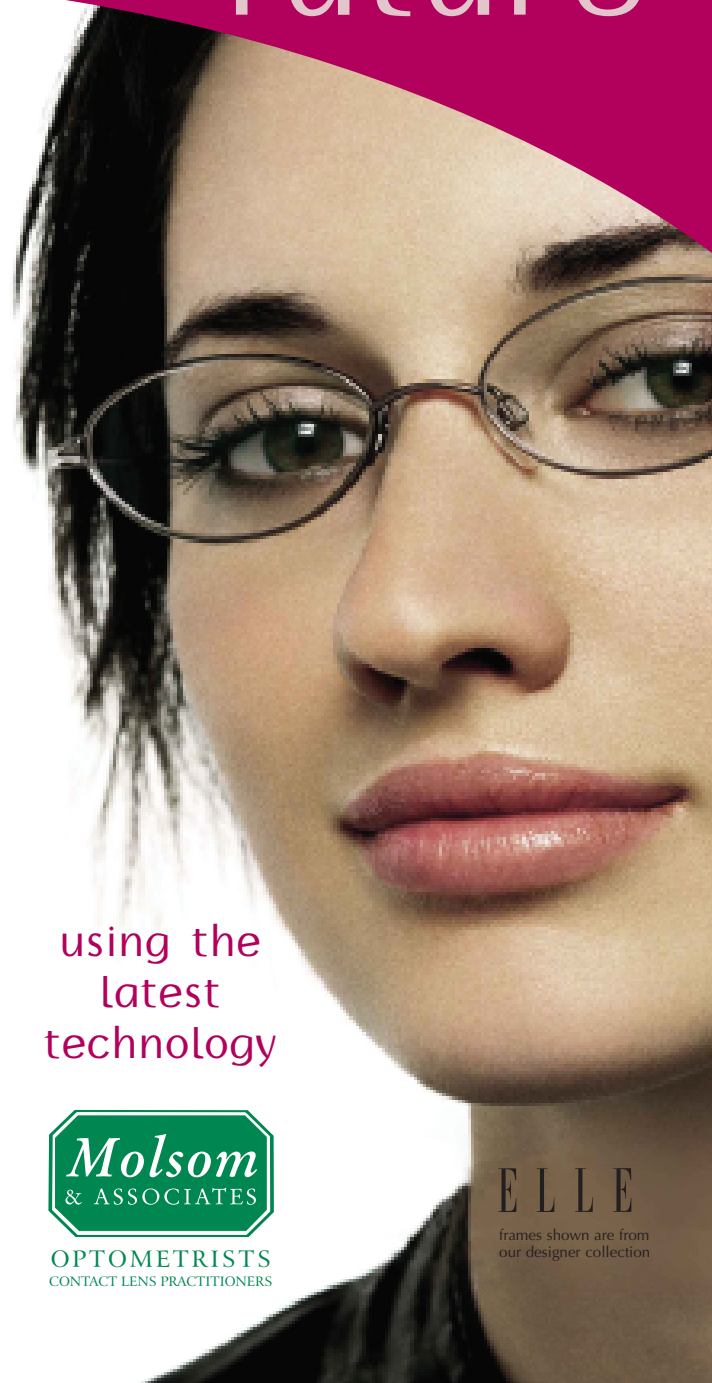

At Molsom & Associates we want you to look and feel your best with your new frames and lenses. Now we can help you to make the right choice by capturing video sequences with different types of frames.

Frame Selection

Our Glass studio system has a small camera which takes photographs enabling you to look at yourself wearing different frames.

Lens simulation

Using the latest technology, we can also show you how your spectacles will look with different weight and thicknesses of lenses available. We can even show you how you could benefit from different coatings on your chosen lens type.
